

SE2011 – Technical Evolution of Multimedia

Creative Art Assignment - Short Explanation

Y2S2

IT24100164

Hansani P.T.K.

01. Selected Theme: Nature – Snowfall Scene

02. Explanation of Visuals:

I created a winter scene with snowfall. There is a snowman on the left side and a Christmas tree on the right side. The ground is covered with snow and I added some small snowballs to make it look more natural. There are four clouds in the sky.

For this artwork I used basic shapes like circles (ellipse), rectangles, and triangles to draw all the objects. I also used different colors for sky, snow, tree, and clouds to make the scene clear and nice.

03. Explanation of Motion / Interaction:

The animation is done using the draw() function. The clouds move from left to right using variables. When a cloud goes out of the screen, it comes back from the left side using an if condition. The snow is created using a for loop and falls down continuously. When the snow reaches the ground, it starts again from the top. I also added mouse interaction where moving the mouse changes the speed of the falling snow.

04. What I Learned from This Assignment:

From this assignment, I learned how to use variables, loops, and if conditions in Processing. I understood how to create simple animations using draw(). I also learned how to combine coding with creativity to make a visual scene.
